Exam. Code : 103203 Subject Code : 1101

# B.A./B.Sc. 3<sup>rd</sup> Semester

### **COMPUTER SCIENCE**

#### (Computer Oriented Numerical & Statistical Methods)

Time Allowed—3 Hours] [Maximum Marks—75

**Note** :— Attempt any **FIVE** questions. All questions carry equal marks.

- (a) Explain Numerical methods and Numerical analysis through suitable justifications.
  - (b) What is error ? How it is estimated ? Give suitable examples to measure them.
- 2. (a) Define non-linear equation How these are solved using bisection method ? Explain.
  - (b) Solve using Gauss-Seidel method with x<sub>0</sub> = 0, x<sub>1</sub> = 0 and x<sub>2</sub> = 0 as starting values. Carry out 7 iterations :

 $-3.5x_0 + x_1 + 1.5x_2 = 2.5$   $x_0 + 4x_1 - x_2 = 4$  $-2x_0 - 0.6x_1 - 3.5x_2 = -16$

3. (a) Consider

x	40	60	80	100
f(x)	205	201	195	190

Fit a third-order polynomial using Newton backward difference formula.

- (b) How matrix inversion method works ? Explain with example of your choice.
- 4.<sup>17</sup> (a) What is the importance of Numerical Integration ? Explain how Simpson's 3/8 Rule is utilized for it.
  - (b) Let given function f(x) is

X	2	3	6	8	12
f(x)	14	20	17	16	23

Estimate f(5) from the above table.

- (a) Define Mean. How arithmetic, geometric and harmonic means are calculated ? Explain with example.
  - (b) Why standard deviation and co-efficient of variations are calculated ? Explain the formulas for their calculation.
- (a) Explain the difference between Bivariate Distribution and Multivariate Distributions with suitable examples.

## a2zpapers.com

- (b) Why regression is used ? Explain multiple regression calculation through suitable example.
- 7. (a) What is measured through linear trend and non linear trend ? Explain in detail.
  - (b) What is correlation ? How is it different from regression ? Explain with suitable example justifications.
- 8. Write notes on :---
  - (a) False Position Method
  - (b) Simultaneous solution of equations.
