Exam. Code : 105702 Subject Code : 1530

B.Sc. Information Technology Semester—II NUMERICAL METHODS & STATISTICAL **TECHNIQUES**

Paper-V

Time Allowed—3 Hours] [Maximum Marks—75

- Note : Attempt any five questions. All questions carry equal marks.
- Determine the two smallest roots of the equation : 1.
 - $f(x) = x \sin x + \cos x = 0$, to 3 significant digits using :
 - (i) False position method
 - (ii) Bi-section method.
- Write the procedure for Simpson's 3/8 rule. Integrate 2 the function $5x^3 - 3x^2 + 2x + 1$ from x = -1 to x = 1using Simpson's rule with h p = 1.
- Discuss and differentiate between Gauss elimination 3. and Gauss Jordan methods for simultaneous equations with suitable example.

4. The table below gives square roots for integers :

X 1		2	3	4	5		
f(x)	1	1.4142	1.7321	2	2.2361		

Using second order Lagrange interpolation polynomial; find the square root of 2.5.

Use the method of least squares to fit the curve 5 $f(x) = c_0 x + c_1 x$ for the following data :

X	1 .	4	16	25
f(x)	16	14	12	10

- (a) A student while calculating the mean and standard 6. deviation of 25 observations obtained a mean of 56 cm and a standard deviation of 2 cm. It was later discovered that he had wrongly copied down an observation as 64. What is the mean and standard deviation if the correct value is 46?
 - (b) What is the relationship between mean, median and mode ? Justify with an example.
- Differentiate between mean deviation and standard 7. deviation. Which is a better measure of dispersion and why ? Find the standard deviation from the following table :

Age under	10	20	30	40	50	60	70	80
No. of persons dying	15	30	53	75	100	110	115	125

- Write short notes on the following : 8.
 - (a) Types of errors
 - (b) Problem of multiple roots
 - (c) Divided differences.
